Ashish Regmi

Senior Software Engineer

Waterloo, Ontario, Canada | wanemregmi@gmail.com | ashishregmi.ca | linkedin.com/in/ashish-regmi | github.com/mrarejimmyz

PROFESSIONAL SUMMARY

Software engineer based in Waterloo, Ontario. Currently Lead Developer at ZKward, where I build and run AI agents in production. Previously a Senior Software Developer at Revolent Group on an enterprise client placement at Manulife. Earlier in my career I worked in technical operations at Shaw Communications and frontend development at GamerLink, so I am comfortable both building software and working with the people who use it. Available to start immediately.

TECHNICAL SKILLS

Programming: Python, TypeScript, JavaScript, Node.js, Move
Engineering practices: Remote diagnostics and troubleshooting, end-user training, QA and test planning, clear technical documentation, stakeholder communication
Backend & systems: Backend architecture, serverless integrations, external system integration, resilient infrastructure, Cloudflare DNS
AI systems: Local LLMs, AI agents, tool calling, multi-agent orchestration, autonomous verification, risk monitoring

PROFESSIONAL EXPERIENCE

Lead Developer | ZKward

September 2025 – Present | Waterloo, Ontario

- Architected and deployed a multi-chain decentralized finance platform featuring a high-yield USDC vault on Sui mainnet, automated perpetual hedging through Bluefin, and post-quantum ZK-STARK proof attestations.
- Developed a seven-agent AI risk-orchestration framework that monitors market volatility, evaluates smart-contract health, and adjusts automated hedging parameters to protect user capital.
- Wrote and optimized secure Move smart contracts for transaction safety, low gas overhead, external data-feed integration, and multi-chain liquidity workflows.
- Led the protocol rebrand from ZkVanguard to ZKward, including domain acquisition, enterprise email routing, Cloudflare DNS, and secure serverless backend integrations.

Senior Software Developer | Revolent Group

January 2022 – August 2024 | Client placement at Manulife, Toronto

- Built and customized enterprise backend systems: workflow automation, data models, validation rules, approval processes, reports, and dashboards for a major financial-services client.
- Implemented role-based access controls, permission models, and data-security controls for appropriate user access and platform governance.
- Integrated enterprise systems with external platforms via REST APIs; led data migration, cleansing, validation, and deployments across environments.
- Collaborated with business stakeholders to translate operational needs into scalable technical solutions; troubleshot production issues, documented solutions, and trained end users.

Technical Operator | Shaw Communications

March 2019 – August 2020

- Diagnosed and resolved network and service issues remotely using diagnostic tooling; automated diagnostic routines so a soft refresh ran instantly when a customer requested it.
- Tracked cases through CRM and Netcracker diagnostic tools from report to resolution, escalating complex issues with clear documentation.

Frontend Developer | GamerLink

January 2018 – December 2018

- Developed frontend features with React and React Native.
- Contributed to UI and product design.

SELECTED PROJECTS

ParManusAI: Local LLM Agent Framework

Built an optimized, open-source framework for running local large language model agents with high-speed execution and advanced tool calling. Developed the underlying agent infrastructure rather than only connecting an application to an existing AI endpoint.

Multi-Agent Verification Systems

Built multi-agent AI swarms that coordinate tasks and verify work autonomously, with an emphasis on practical reliability, result checking, and reducing manual review.

HACKATHON WINS & GRANTS

- Best Sign in with Worldcoin App, ETHGlobal Waterloo 2023 (P2PLend)
- Triple winner, StarkHack 2024: Herodotus Best Use of Storage Proof API, Voyager API Prize, Dynamic Pool Prize (Sunya)
- Filecoin Privacy Tools winner, HackFS 2024 (HimalayaZkBarrier)
- Starknet Foundation Seed Grant recipient (Project Sunya)
- 3rd Place, Canada Funnel, WCHL25 Qualification Round (AVAI Agent)

EDUCATION

Conestoga College

Computer Application Security, 2018
Dean's List: A and A+ grades throughout the program.

Sharda University

Bachelor's, Computer Science, 2012–2016

WORKING STRENGTHS

Comfortable moving between writing code, testing it, and working with the people who use it. I document my work, keep data accurate, and learn new tools quickly.
